Summary

Software engineer student focused on backend and full-stack development, building scalable APIs, asynchronous systems, and intelligent applications using Python, FastAPI, React, PostgreSQL, Redis, and Docker. Experienced in authentication, API integration, asynchronous task processing, and AI-powered systems.

Education

Dayananda Sagar College of Engineering, Bengaluru
B.E. in Computer Science and Design

2023 – 2027
CGPA: 8.97/10.0

Experience

AllCognix AI Technologies
AI & Full Stack Development Intern

May 2026 – July 2026
Bengaluru, India

- Developed AI agents and multi-agent workflows using LangChain and LangGraph to automate social media content generation.
- Built an AI-powered Idea Validator with FastAPI and React, integrating Keycloak-based authentication and PostgreSQL for multi-user application data management.

Technologies: Python, FastAPI, React, PostgreSQL, OpenAI API, LangChain, LangGraph, Keycloak

Projects

InterXAI 🤖 (FastAPI, TaskIQ, Redis, Docker, OpenCV)

2025

- Built a backend-driven interview platform with specialized AI agents for resume screening, adaptive questioning, evaluation, and feedback generation, processing interviews end-to-end without manual intervention.
- Developed an asynchronous interview processing pipeline using TaskIQ and Redis for background task execution, caching, and interview workflow orchestration.
- Implemented real-time monitoring with tab-switch detection, developer-tools detection, multiple-person detection, and interview state recovery during network interruptions.

Uroflowmetry 🤖 (OpenCV, FastAPI, React, PostgreSQL, Docker)

2026

- Developed an end-to-end application for automated uroflowmetry analysis using computer vision and a physics-based model for clinical flow measurement.
- Built REST APIs with FastAPI and integrated them with a React frontend for video analysis, report generation, and data visualization.
- Implemented image preprocessing, stream segmentation, ROI tracking, and geometric feature extraction using OpenCV.
- Containerized the application using Docker with PostgreSQL for persistent data management and automated clinical reporting.

Technical Skills

- **Languages:** Python, Java, JavaScript
- **Backend:** FastAPI, REST APIs, API Integration, Authentication, Asynchronous Processing, Microservices
- **Frontend:** React
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Qdrant
- **Core CS:** Data Structures & Algorithms, Object-Oriented Programming, DBMS, SQL
- **AI/ML:** PyTorch, Scikit-learn, OpenCV, LLMs, RAG, Agentic AI, LangChain, LangGraph, NumPy, Pandas
- **DevOps & Tools:** Docker, Git, GitHub

Achievements

- Secured 3rd Runner Up position at Hackedemia, a 24-Hour National Hackathon held in Bengaluru.
- Qualified for the College Level Round of Smart India Hackathon (SIH) 2025.
- Solved 110+ Data Structures & Algorithms problems in Java.

Certifications

- **Introduction to Machine Learning (Elite)** – NPTEL, IIT Madras Jan–Apr 2026
- **Generative AI & Full Stack Development** – AllCognix AI Technologies May–July 2026
- **GEN-AI Camp – Generative AI, Multimodal AI & NLP** – AlgoUniversity July 2026
